## Blue Carbon: Can Coastal Wetlands Combat Climate Change?

“Carbon Nation Conversations” hosted by Carbon Nation Director and Producer Peter Byck

### Lisamarie Windham-Myers

*Biologist, U.S. Geological Survey*

Join Peter for a conversation with Lisamarie Windham-Myers on the importance of preserving and restoring “Blue Carbon” wetlands as buffers for global adaptation to sea-level rise and mitigation for rising atmospheric CO<sub>2</sub>.

Biologist Windham-Myers researches plant physiology and its influence on carbon, nutrient, and trace-metal biogeochemistry in wetlands. Based in Menlo Park, California, she participates in local, national, and international efforts to monitor and model greenhouse gas fluxes in coastal wetlands.

### Peter Byck

*Director and Producer, Carbon Nation*

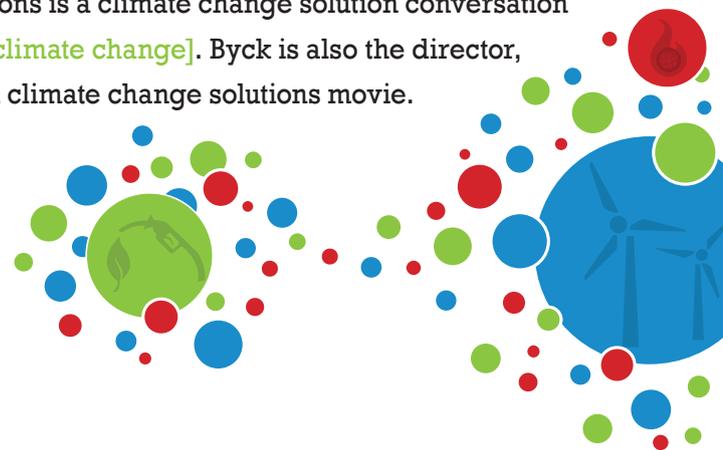

Peter Byck is the host of a lecture series offered by ASU's Global Institute of Sustainability. Carbon Nation Conversations is a climate change solution conversation [that doesn't even care if you believe in climate change]. Byck is also the director, producer and writer of Carbon Nation,<sup>TM</sup> a climate change solutions movie.

**Wednesday, October 2, 2013**

**12:30 - 2:00 p.m.**

Marston Exploration Theater, ISTB4 Building  
Arizona State University, Tempe campus

(lunch will be provided at 12:00 p.m.)

**ASU** GLOBAL INSTITUTE  
of SUSTAINABILITY

ARIZONA STATE UNIVERSITY

**RSVP: [sustainabilityevents@asu.edu](mailto:sustainabilityevents@asu.edu)**
